About Project

Simple and easy project that create for learning and showcase of my skills and knowledge in Software development Domain. Help me to clear and Concepts and Ideas and give the chance to upskills and clear concepts

Introduction

URL: <https://task0management0app.netlify.app/> , When click on this url you will first redirect in login/ register page at first time. Then register if you don't have account otherwise login after login you can see your profile on top of send window. *Authorization and email sender features*

And add new task, view, edit and delete task.

It's clear my doubts and concepts from creating part to deploy.

Tools and Tech :

- Vs Code used for writing and edit part

- HTML, CSS and JavaScript Frontend Part
- Python – Base language,
- Pydantic - Validate data, correct or not
- SQLAlchemy – Connection between Backend to Database (why – robust means write once and use with different softwares like Postgresql, Mysql etc)
- FastAPI – used to create endpoints(routes)
- Uvicorn – used to make server
- Supabase (PostgreSQL) platform – use because ease to deploy online

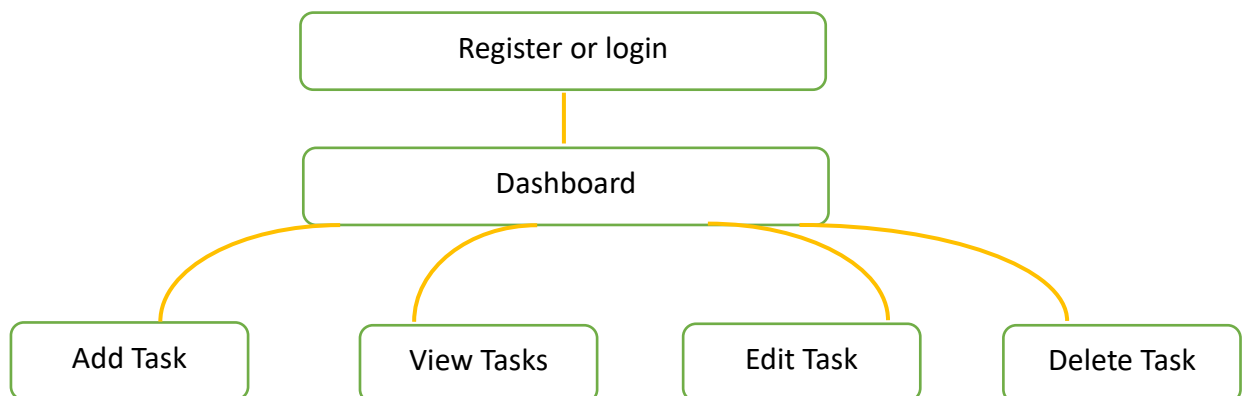

Deploy(Render and Netlify)

- Render : Use to make live backend
- Netlify : Use to make live Frontend

Why

This is just for Learning And Showcasing purchase to tell that I have knowledge End-to-End Project Deploy.

Work-Flow

Structure and Folders

1. Frontend: index.html, style.css, scripts.js
2. Backend:
 - SRC folder:
 1. Users:
 - a. controller.py: all actual function where logic implements
 - b. dtos.py: data type checker logic implements with pydantic
 - c. model.py: schema of Table is implements using sqlalchemy

- d. router.py: fastapi routes are present here
- 2. Tasks: Same as Users
- 3. Utils:
 - a. db.py: Connection between backend to PostgreSQL
 - b. helpers.py: It's take token from user side and check the it's valid.
 - c. mail.py: use to send email on their provided mail id
 - d. settings.py: confirm the data type

APIs(Routes)

In this project I used APIRoutes.

<https://task-management-app-2-hfeq.onrender.com/users/register>

<https://task-management-app-2-hfeq.onrender.com/users/login>

<https://task-management-app-2-hfeq.onrender.com/tasks/create>

https://task-management-app-2-hfeq.onrender.com/tasks/all_tasks

https://task-management-app-2-hfeq.onrender.com/tasks/one_task

https://task-management-app-2-hfeq.onrender.com/tasks/update_task

https://task-management-app-2-hfeq.onrender.com/tasks/delete_task

Summary

It's good one that give me confidence and clear my concepts end-to-end. Help me to understand the things.

I used technology whatever I learnt.
